## Chapter IV: How many “Sandtowns” are there nationwide?

# How many “Sandtowns” are there nationwide?

Daniel Princiotta, PhD Student, Johns Hopkins University (@dprinciotta)

**Step 1:** Choose a data source

# Data source: American Community Survey

- Nationwide coverage
- Data at the “neighborhood” (Census tract) level
- Recent: 2009-13 (5-year average)
- Contains wide array of data
- Publicly available

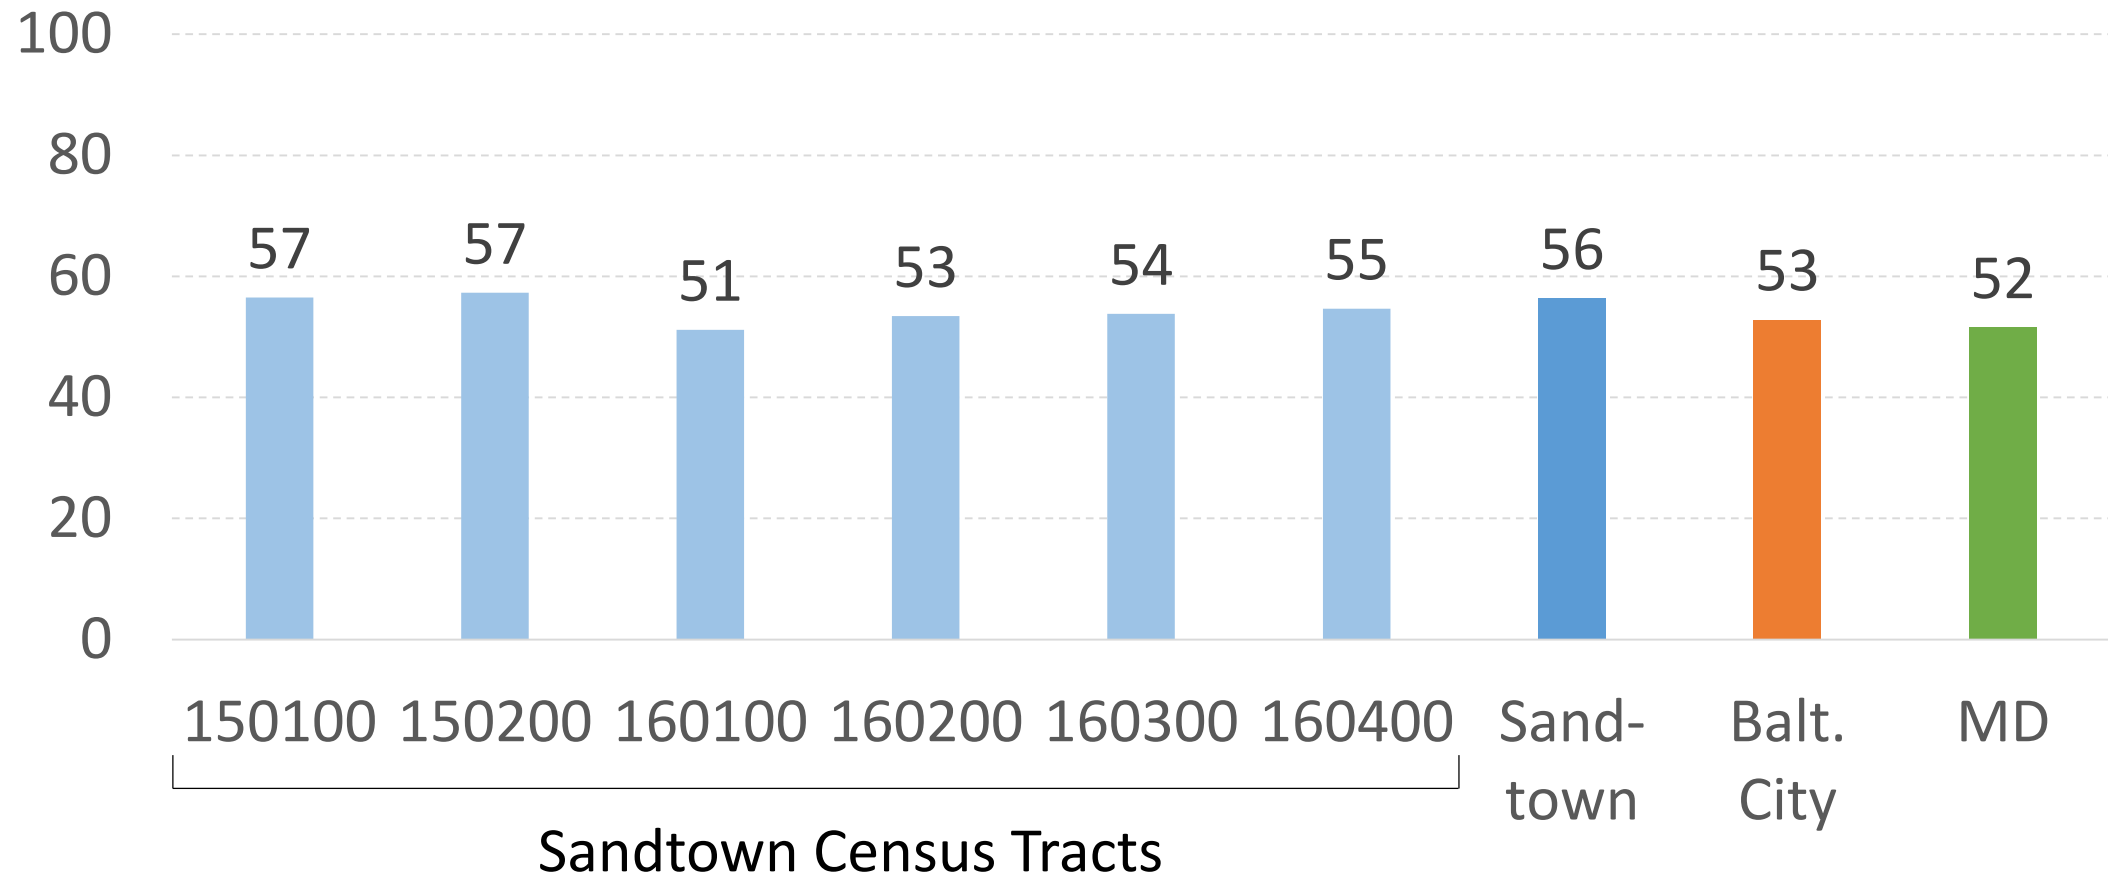

**Step 2:** Identify indicators that distinguish Sandtown from other neighborhoods in Baltimore City and Maryland

# Indicators to flag “Sandtowns”

- Examined over 1,500 potential indicators
- Identified 15 indicators that:
  - Showed substantial differences between Sandtown (weighted average of 6 Census tracts), Baltimore City, and Maryland
  - We judged as important
  - Addressed various aspects of community

Indicators distinguish **between** Sandtown and other geographies, but—for some indicators—substantial variation exists **within** Sandtown

# Percentage of total population that is female

# Percentage of total population that is white

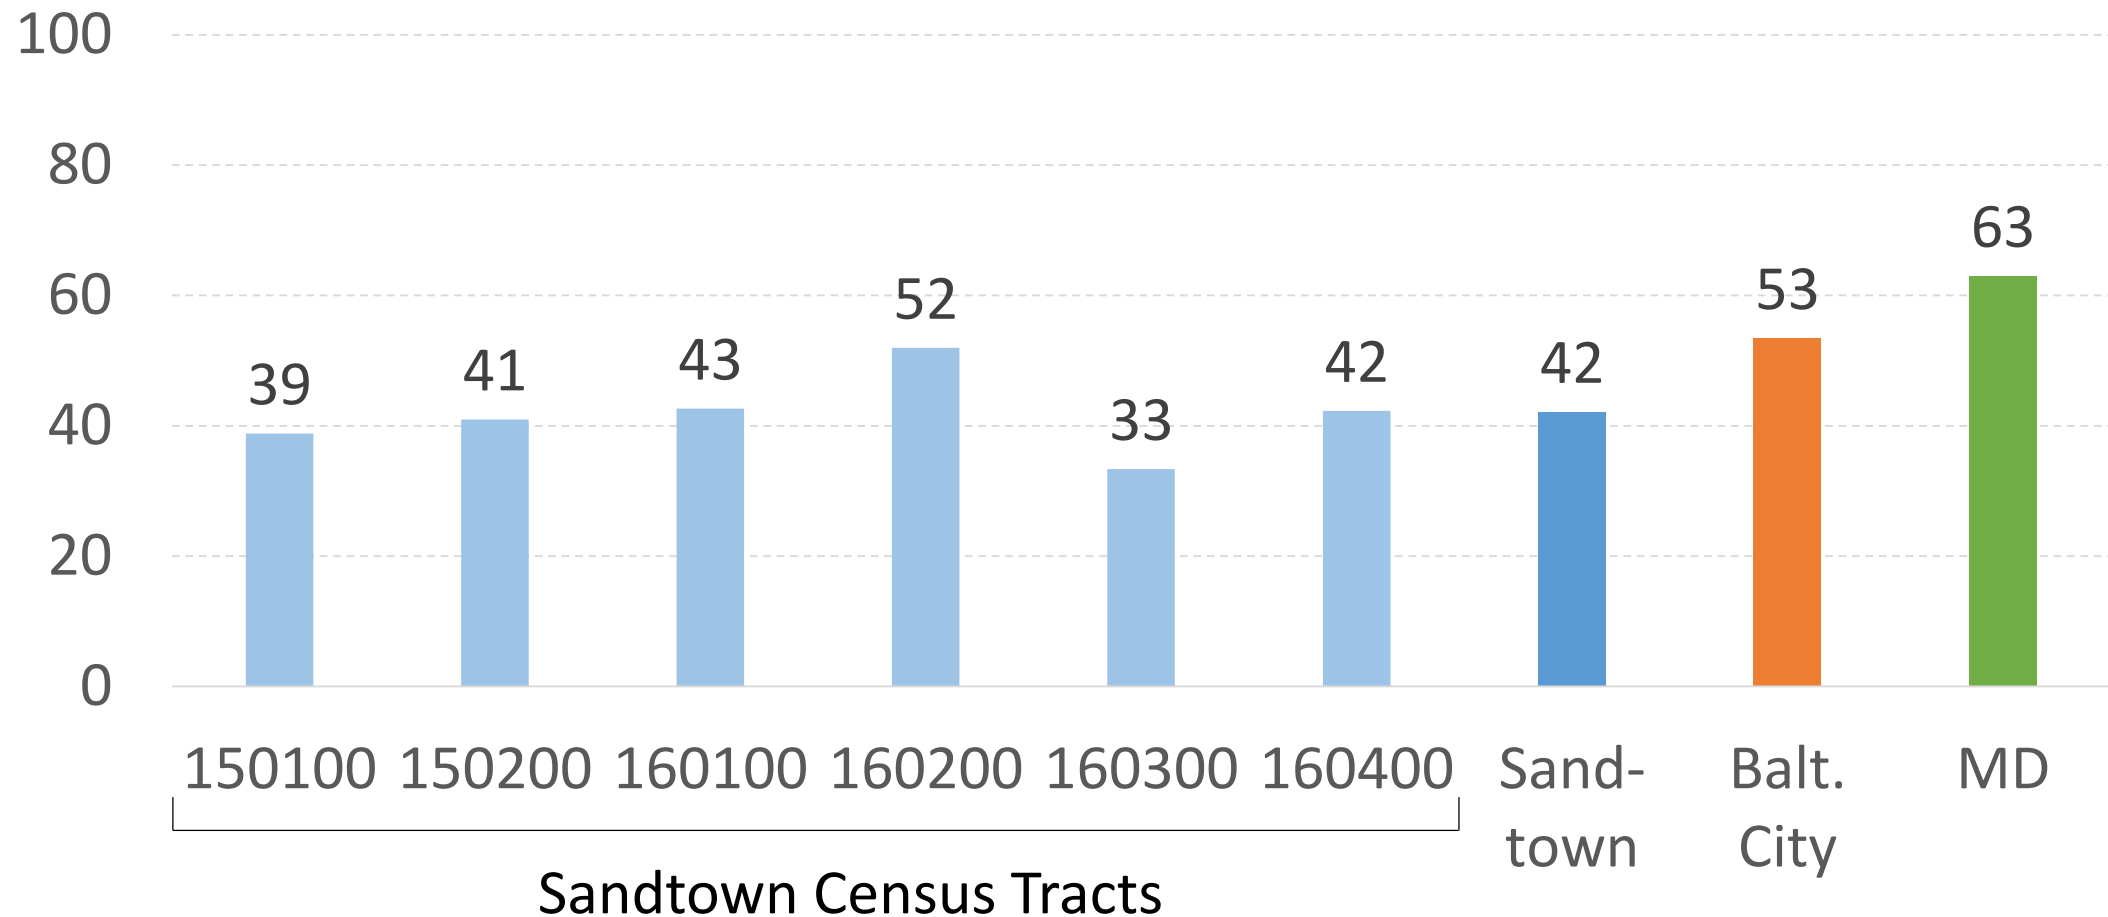

# Percentage of households with one or more child headed by a married couple

# Percentage of adults age 25 and above with a bachelor's degree or higher

# Percentage of population age 16 and above that is employed

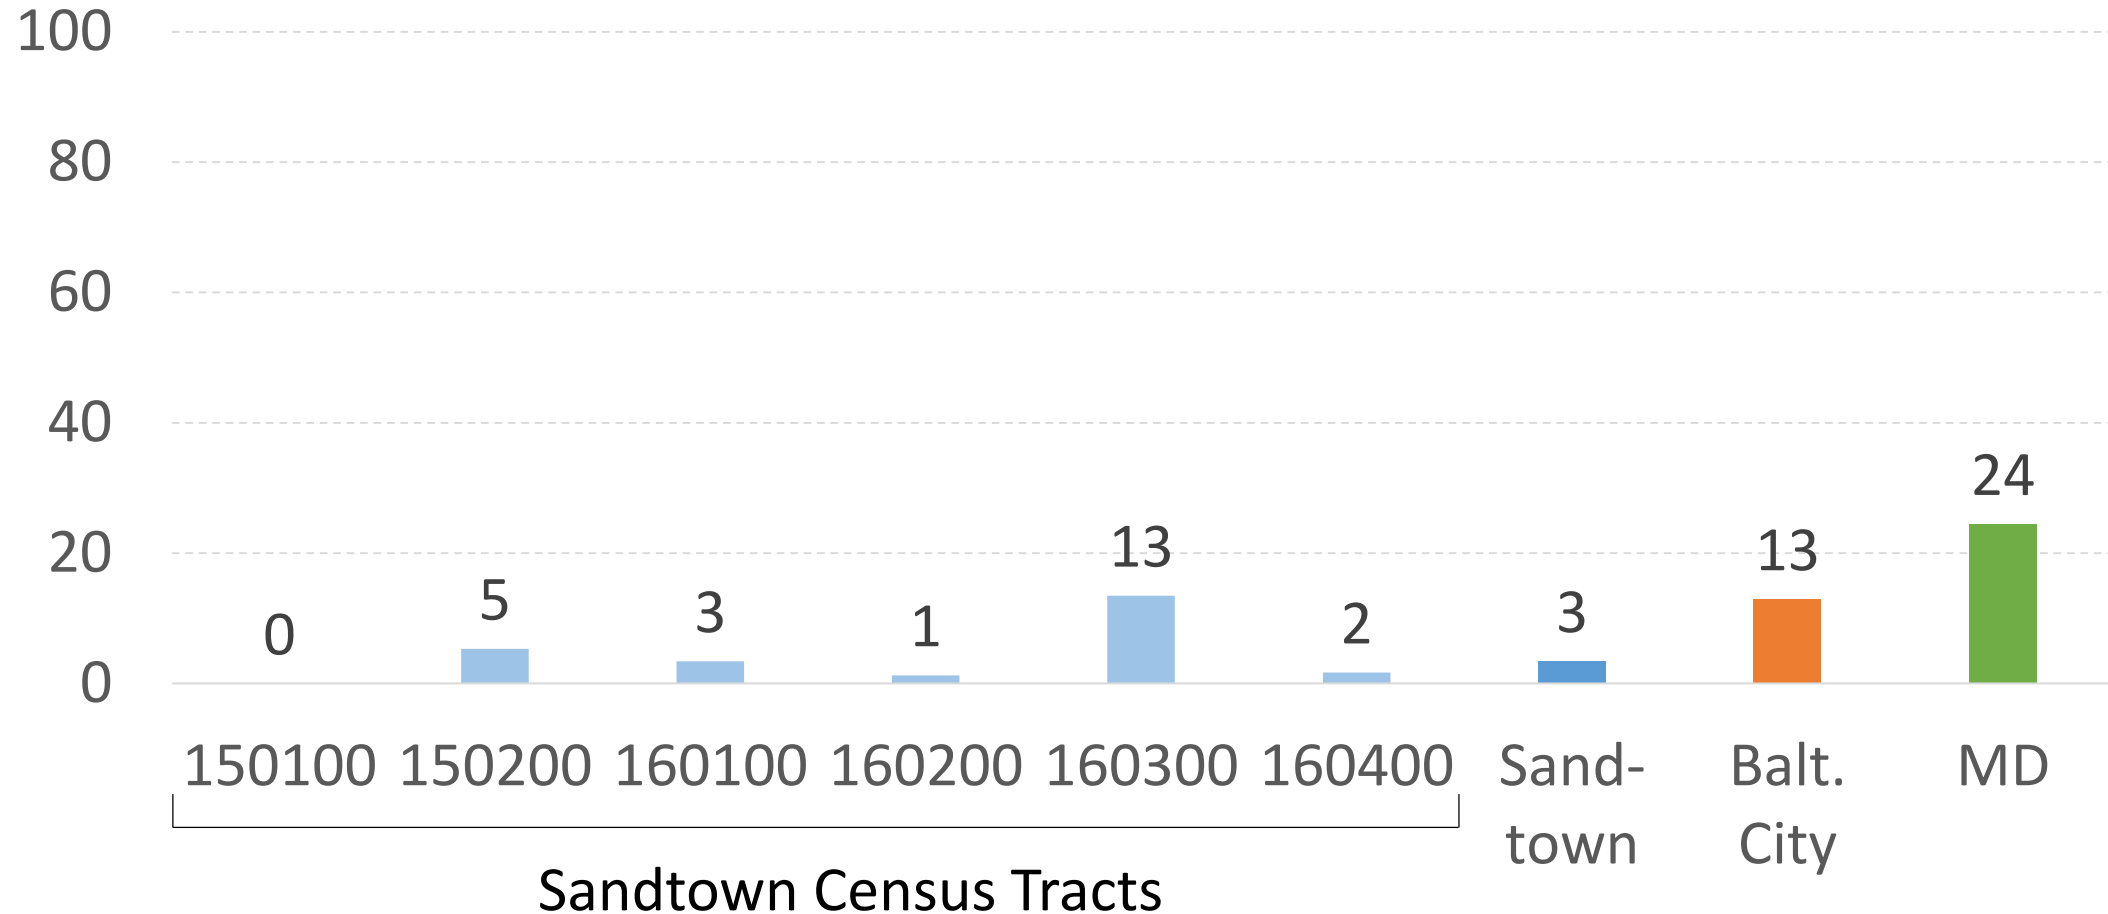

# Percentage of employed population age 16 and up working in white collar occupations

# Median household income

# Percentage of households with interest, dividends, or net rental income

# Income per capita

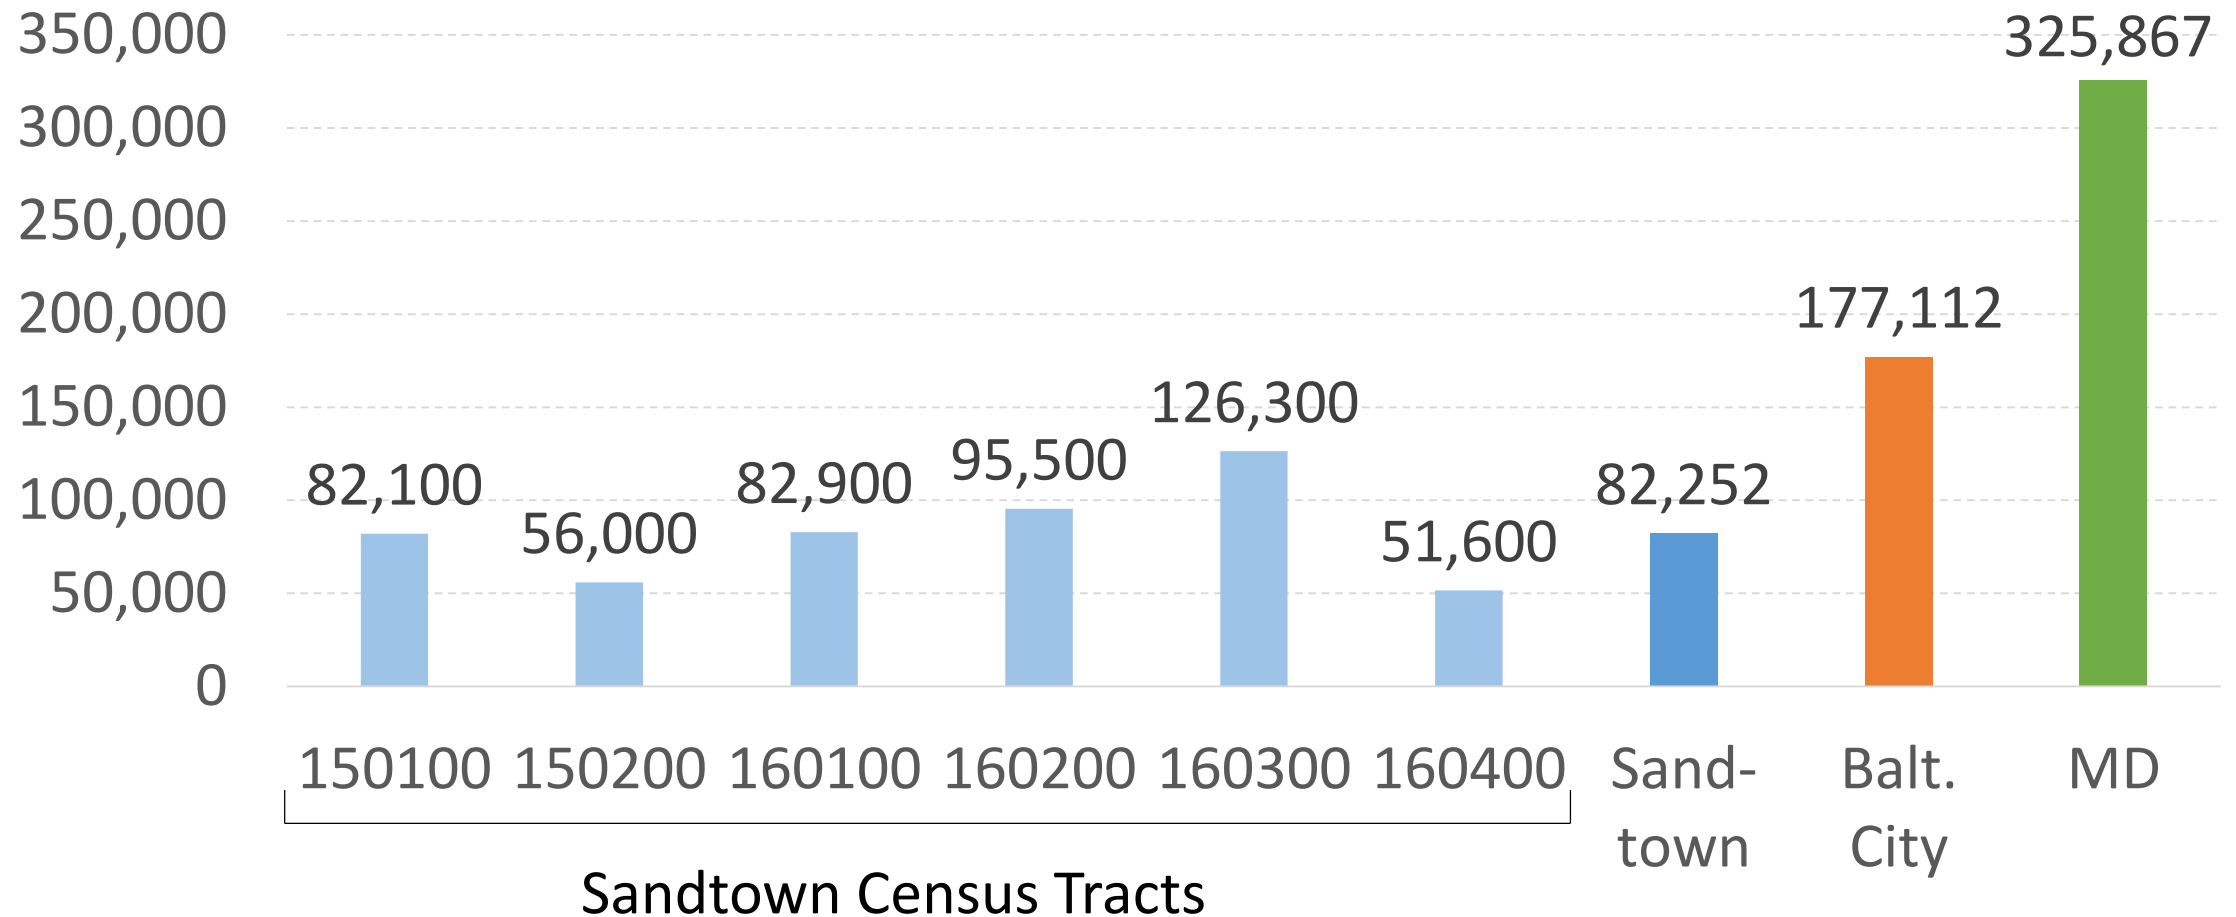

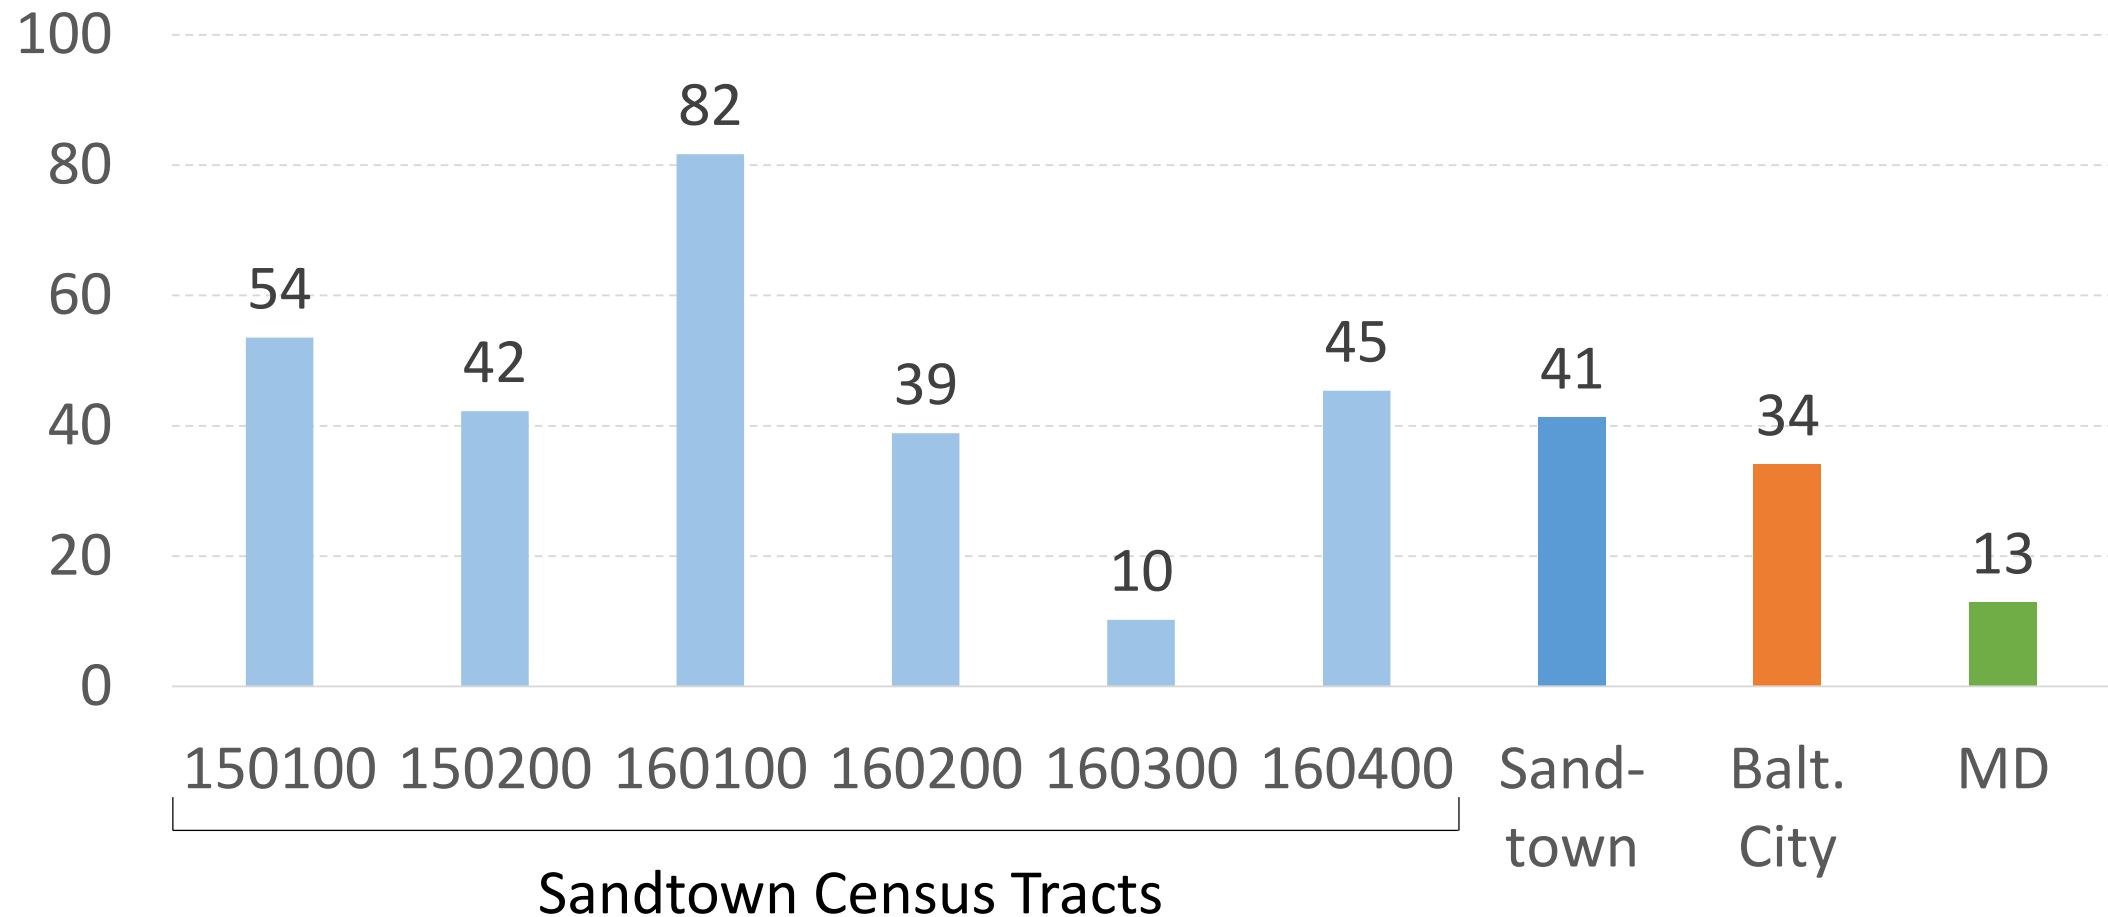

# Percentage of housing units that are vacant and not for rent or sale

# Median value of owner-occupied housing units

# Percentage of children ages 0-17 living in poverty

# Percentage of total population living at or above 200 percent of poverty

# Percentage of the population under age 17 with private health insurance

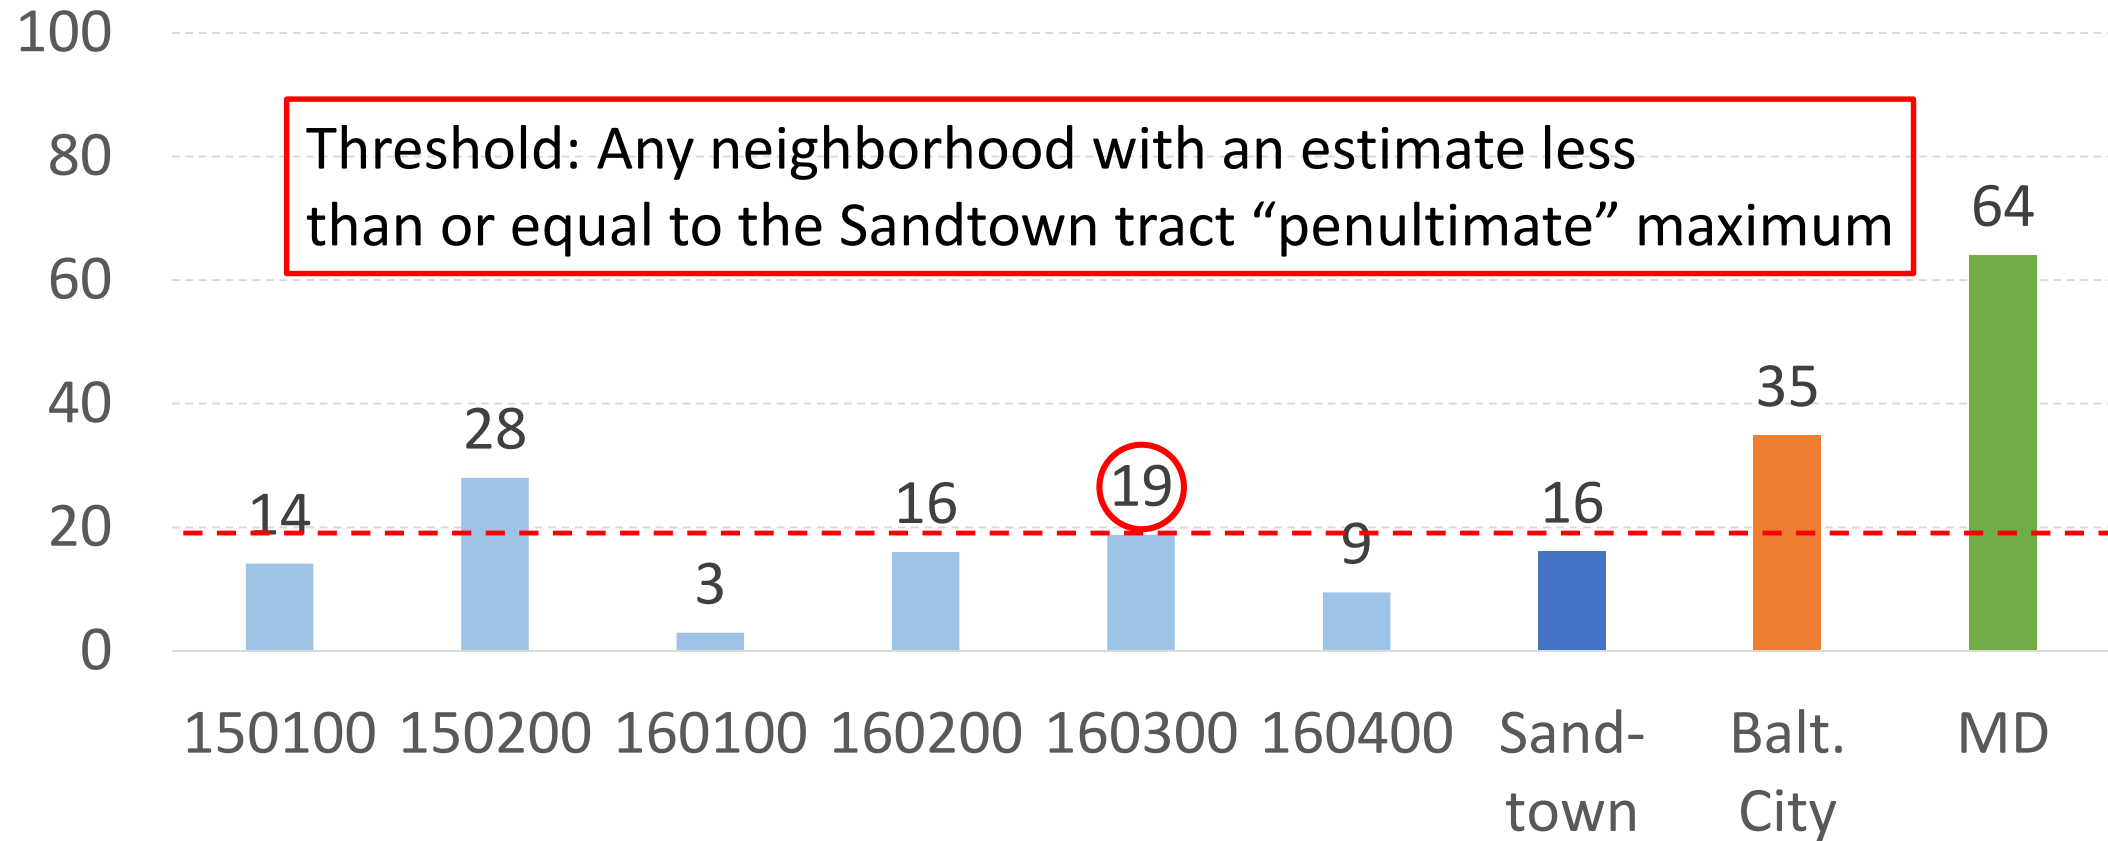

# Percentage of commuters ages 16 and above who travel to work in 30 minutes or less

**Step 3:** Choose thresholds for each indicator

# Threshold: penultimate maximum example

Percent of households with one or more child under age 18 headed by a married couple

# Thresholds (penultimate max/min)

Indicator		Threshold
Female	>=	53.43
White	<=	0.27
2 Parents, Married	<=	18.78
BA or higher	<=	6.30
Employed	<=	42.64
White Collar	<=	17.37
Median Income	<=	27,241.00
Have Investments	<=	5.34

Indicator		Threshold
Income / Capita	<=	14,158.00
Vacant Housing	>=	27.37
Median House Value	<=	95,500.00
Child Poverty	>=	38.86
200% Poverty or Up	<=	39.17
Child Private Health Insurance	<=	22.80
Commute under 30 minutes	<=	40.44

**Step 4:** Choose a criteria for being a  
“Sandtown”

What percentage of neighborhoods meet individual thresholds?

# Percentage of neighborhoods meeting individual “Sandtown” thresholds

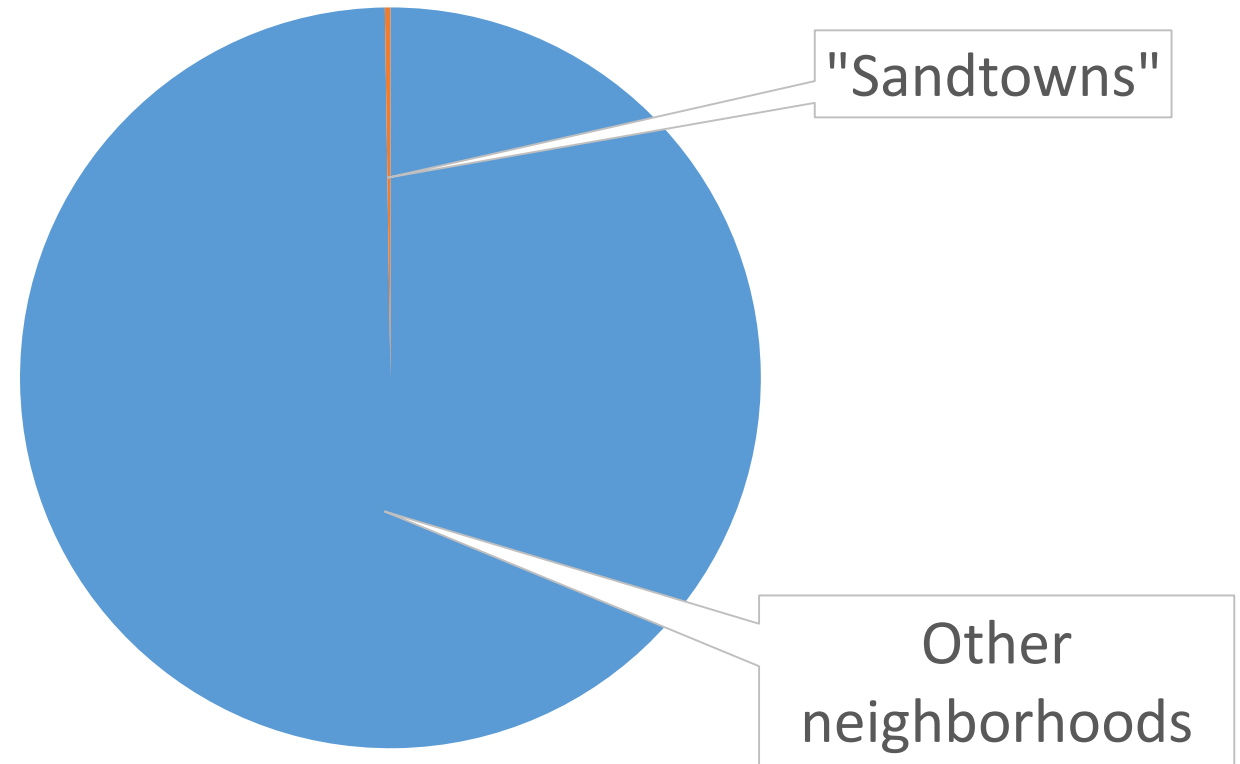

# “Sandtown” Criteria

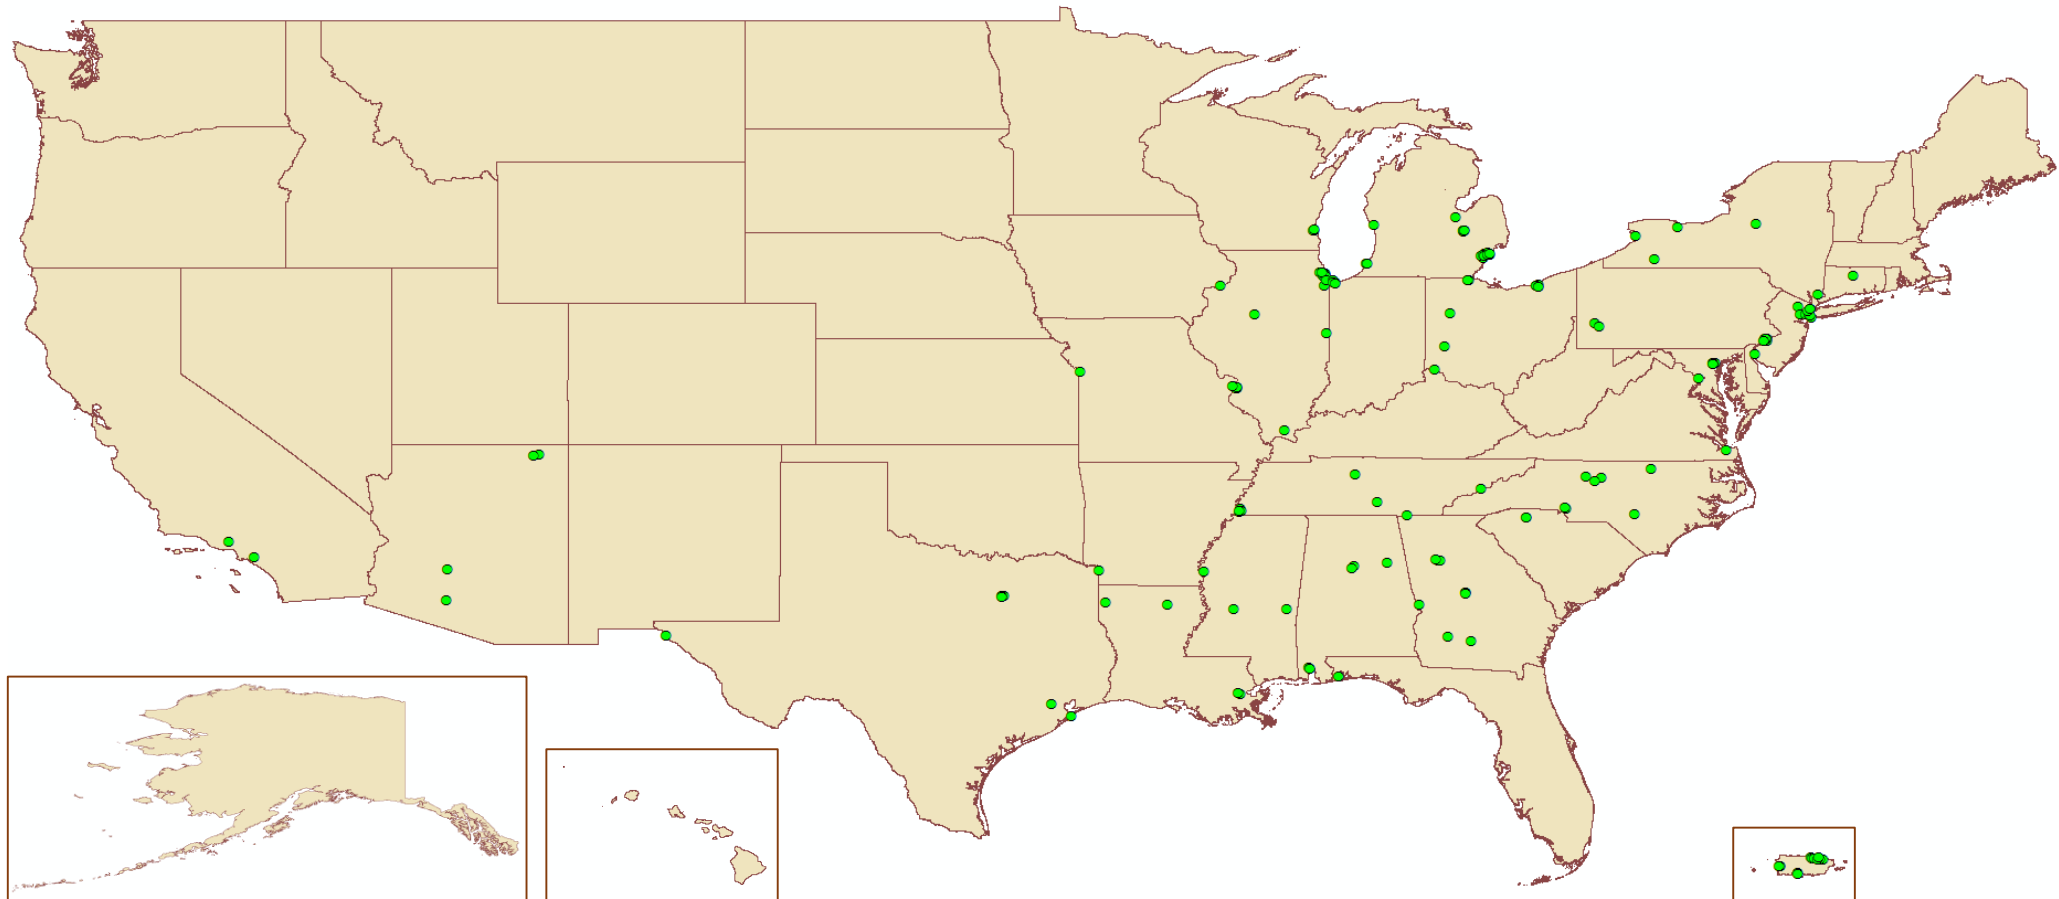

- Meet thresholds for 12 out of 15 (80 percent) indicators

# “Sandtowns” nationwide

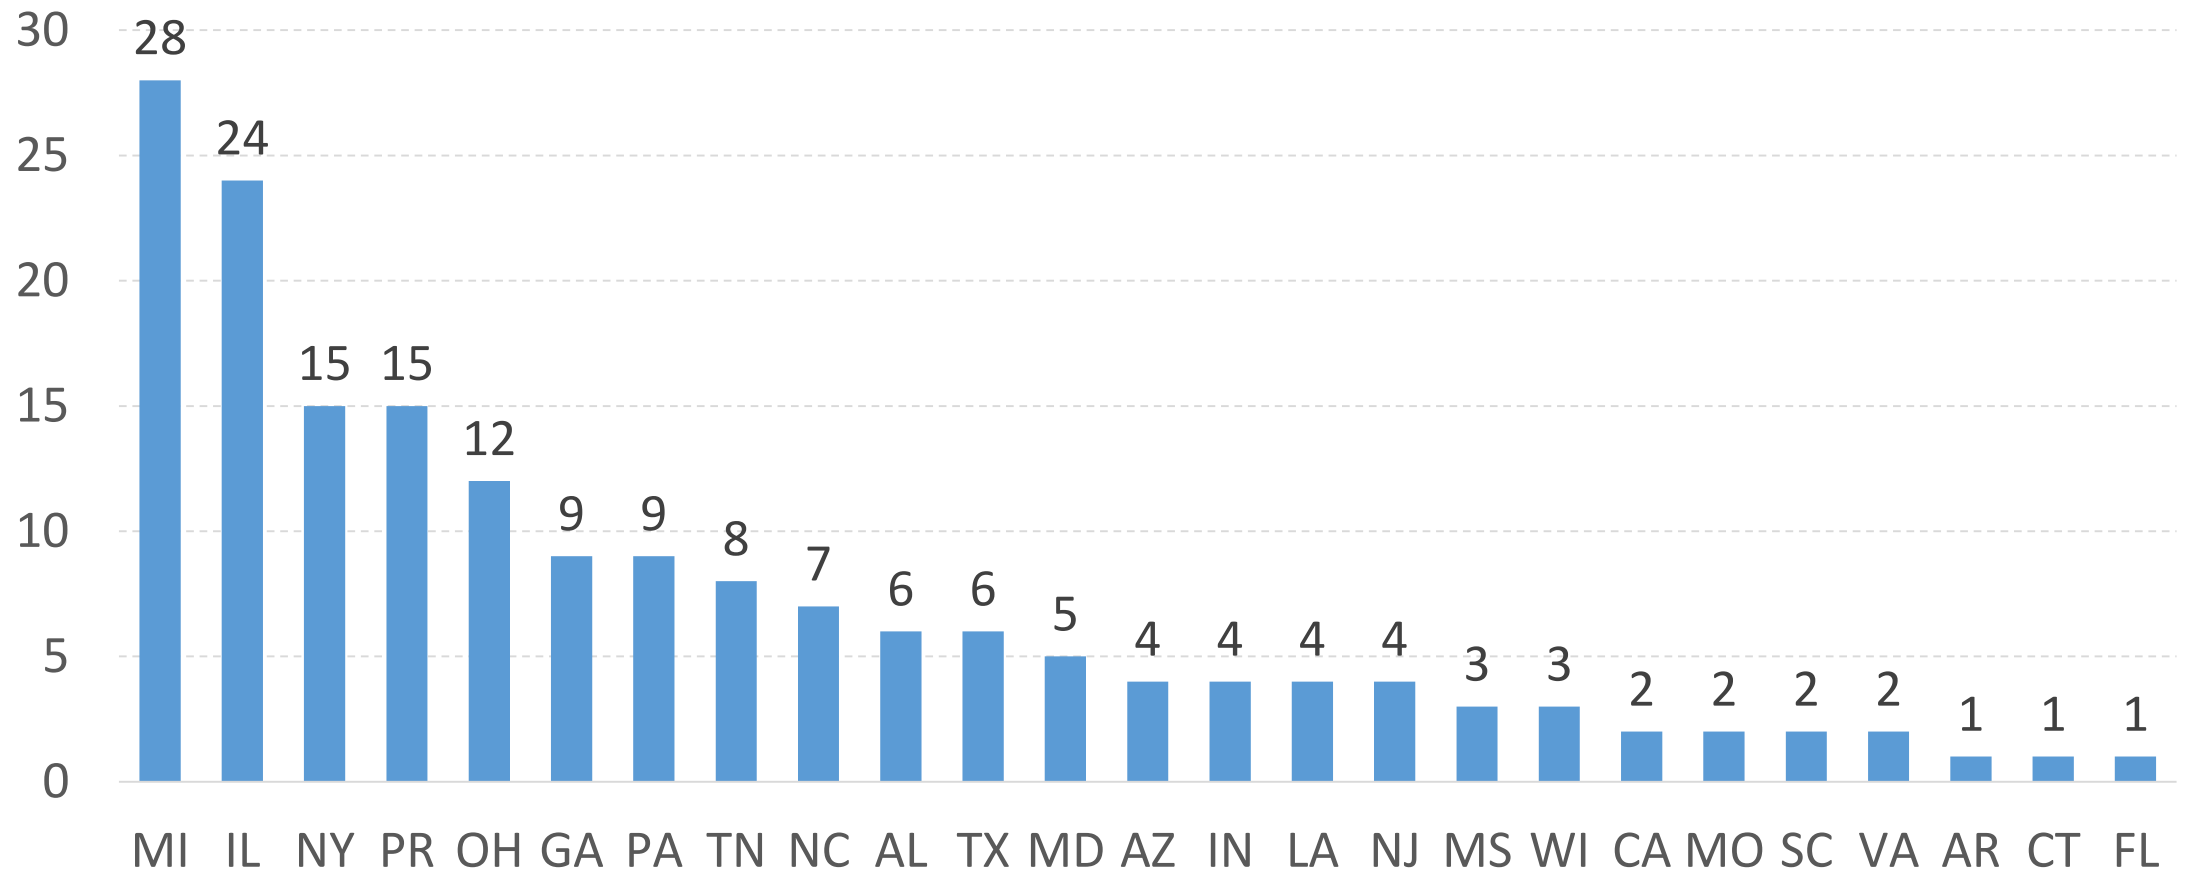

- 177 “Sandtowns”  
out of 73,285 neighborhoods
- 0.24% of all neighborhoods
- Located in 81 counties
- Located in 25 states/territories
- For comparison: 3,570  
concentrated (40%+) poverty  
neighborhoods

# “Sandtowns” nationwide

# “Sandtowns” by state

# Top 11 “Sandtown” counties

County	“Sandtowns”
Wayne County, Michigan	18
Cook County, Illinois	16
Philadelphia County, Pennsylvania	7
Cuyahoga County, Ohio	6
Genesee County, Michigan	6
San Juan Municipio, Puerto Rico	6
Baltimore city, Maryland	5
Kings County, New York	4
Lake County, Indiana	4
Shelby County, Tennessee	4
St. Clair County, Illinois	4

# Summary & takeaways

- Few neighborhoods face the specific constellation of challenges that Sandtown does
- Comparable neighborhoods do exist, in some cases in even higher numbers than in Baltimore (e.g., Chicago, Detroit)
- Analysis underscores:
  - The multitude of challenges facing communities
  - The importance of unpacking poverty
